

# Coordinate Plane Song

## What makes up a coordinate plane?

- The coordinate plane is made up of \_\_\_\_ quadrants.
- The y-axis moves \_\_\_\_\_ to \_\_\_\_\_.
- The x-axis moves \_\_\_\_\_ to \_\_\_\_\_.

## How do you plot points on a coordinate plane?

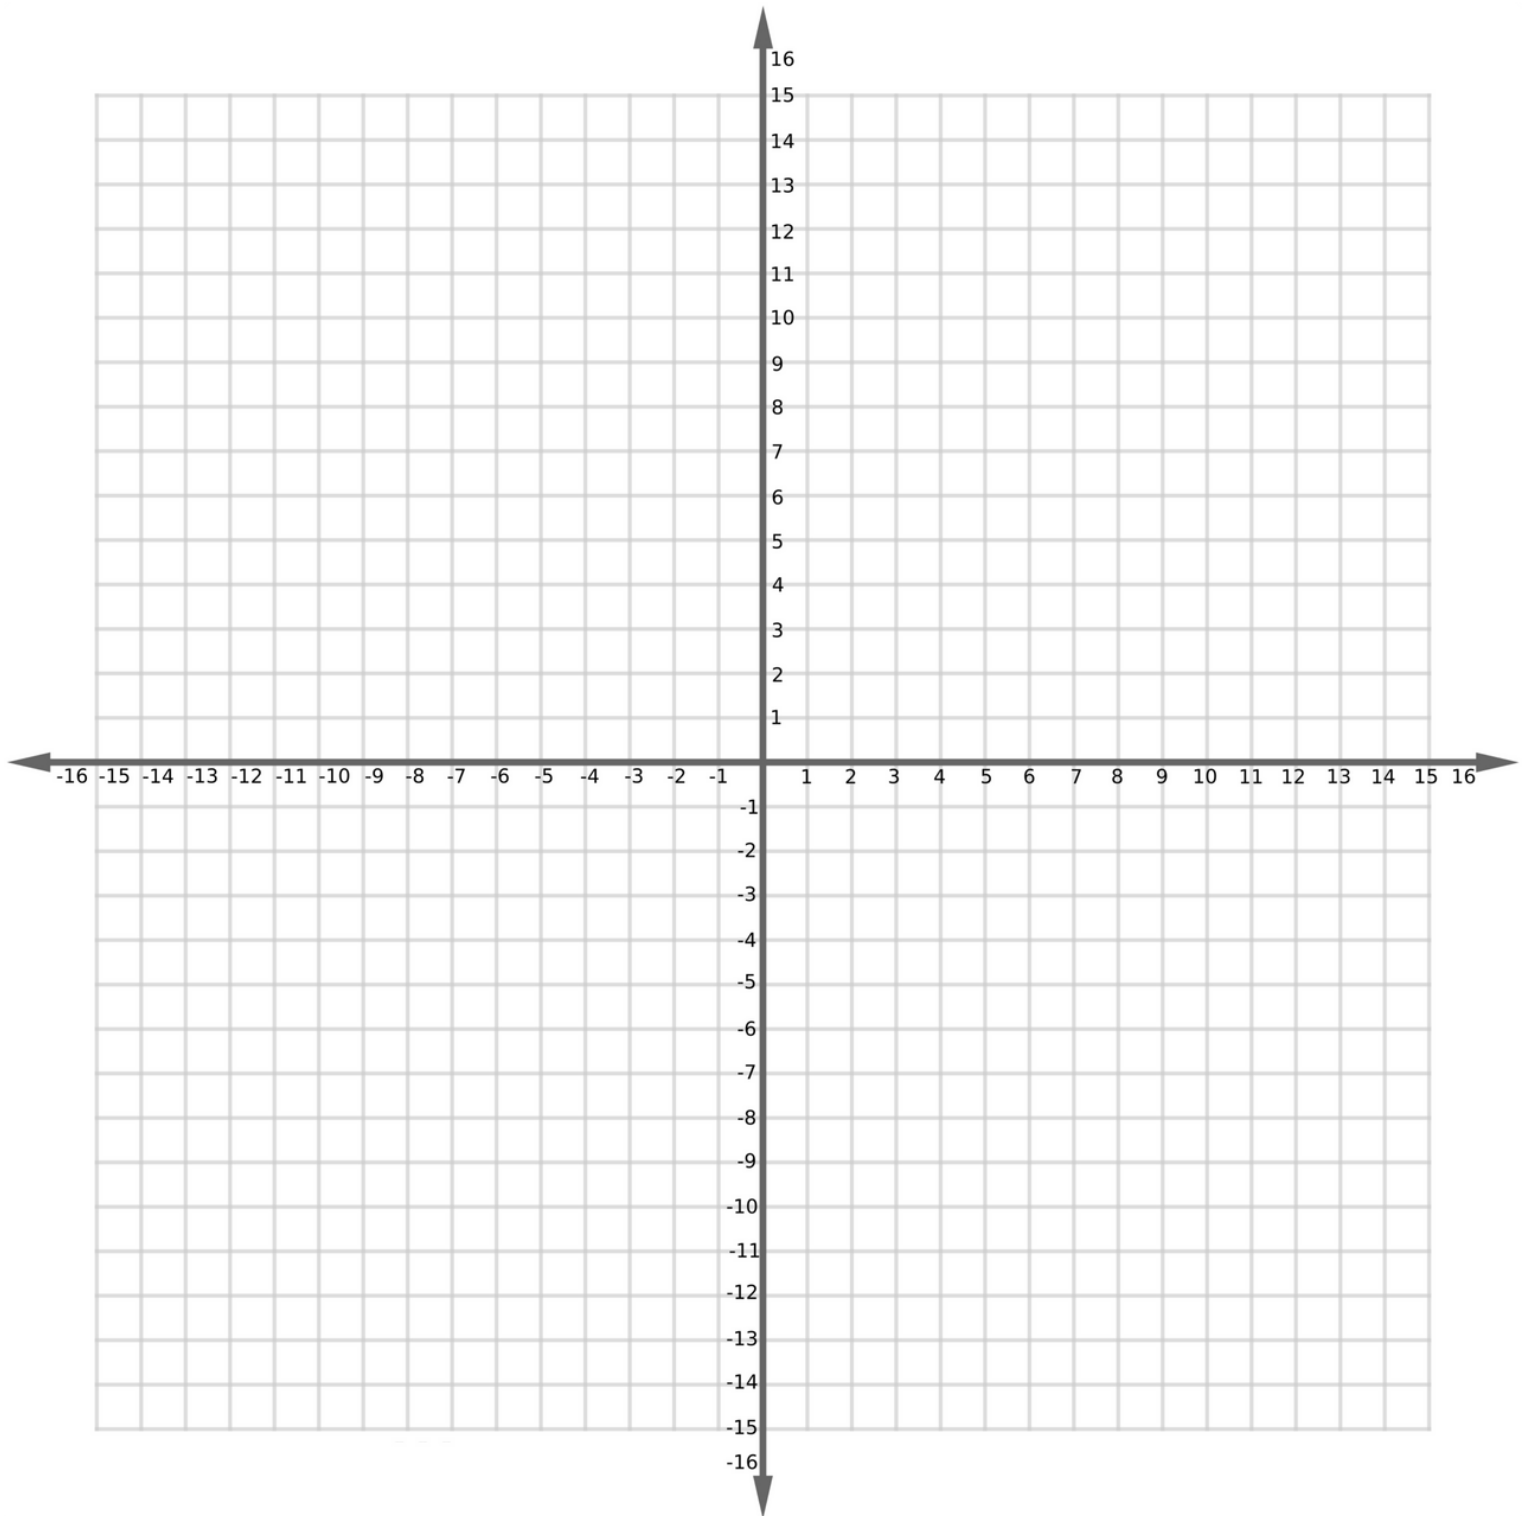

- Directions to plot points come in \_\_\_\_\_.
- The \_\_\_\_\_ is where the x-axis and y-axis meet.
- The origin point is (\_\_\_\_, \_\_\_\_).
- The first number in the ordered pair corresponds to the \_\_\_\_-axis. The second number corresponds to the \_\_\_\_-axis.
- To help you remember this, just sing the song!

"You gotta \_\_\_\_\_

Before you \_\_\_\_\_!"

**Example:** Plot the point on the coordinate plane.

**$(4, 6)$**

**Practice:** Plot the following points on the coordinate plane.  $(2, 8)$   $(11, 2)$   $(5, 5)$

**Challenge:** Plot the following points on the coordinate plane.  $(-6, 3)$   $(-5, -4)$   $(6, -9)$
